

The background is a full-page image of a marbled ceramic surface, likely a wall or floor, with intricate patterns of grey, black, and brown veins on a light beige base. The pattern is symmetrical down a vertical line. In the bottom-left corner, a portion of a light-colored wooden chair is visible, with a rolled-up towel resting on its seat.

Focused on ceramics expertise

RAK Ceramics is one of the largest ceramics brands in the world. Specialising in ceramic and gres porcelain wall and floor tiles and sanitaryware, the company has the capacity to produce 123 million square metres of tiles and 5 million pieces of sanitaryware per year at its state-of-the-art plants across the United Arab Emirates, India and Bangladesh.

Founded in 1989 and headquartered in the United Arab Emirates, RAK Ceramics serves clients in more than 150 countries through a network of operational hubs in Europe, Middle East and North Africa, Asia, North and South America and Australia. Across global operations the company employs approximately 15,000 staff from more than 40 nationalities. RAK Ceramics is a publicly listed company on the Abu Dhabi Securities Exchange in the United Arab Emirates and as a group has an annual turnover of approximately US\$1 billion.

Forged in the mountains of Ras Al Khaimah

RAK Ceramics was established in Ras Al Khaimah in 1989 by H.H. Sheikh Saud Bin Saqr Al Qasimi, member of the Supreme Council and Ruler of Ras Al Khaimah, who aspired to have the best machinery, latest technology, and to produce the best products possible for sale in the world.

Now under the vision and leadership of Sheikh Khalid Bin Saud Al Qasimi, Chairman of RAK Ceramics, the company has enjoyed rapid growth, becoming an industry leader in just 30 years.

INNOTECH - RAK CERAMICS LAB

Innovation is at the heart of RAK Ceramics' philosophy. The company is a pioneer in introducing hi-tech innovations that are a breakthrough in the industry and a world leader in the production of ceramic and porcelain tiles, ideal for use in indoor and outdoor spaces for wall and floor coverings for residential, retail and industrial projects.

A wide range of technologies are used at the state-of-the-art plants including big slabs pressing technology, advanced digital printing technology for industrial decoration and effects, translucent, double and triple charged feeding systems, digital soluble salts, thermal resistant komfy glaze, slim, anti-microbial, glow in the dark, and other advanced technologies.

RAK Ceramics is known for its wide product range and size range, and for its ability to produce bespoke ranges for both small and large scale projects, enabling its clients to bring their ideas to life.

RAK SANIT

The antibacterial revolution

RAK-Sanit is a complete solution that includes porcelain and ceramic tile collections that reduce bacterial contamination and contribute to a healthier living and working environment owing to its antibacterial properties given by silver nitrate compounds.

The RAK-Sanit antibacterial collection of wall and floor tiles features antibacterial technology that is permanently integrated into the tile surface. Once bacteria comes into contact with the tiled surface, the silver ions initiate the elimination cycle. Silver ions in the antibacterial tile surface bind to enzymes, proteins, cell membranes, and the DNA of the microbe to damage DNA and block reproduction, resulting in the death of the organisms.

HIGH PERFORMANCE

Highly technical and extremely versatile surfaces

With a dedicated production technology able to deliver the most modern high-performing surface solution, a new variety of full-body porcelain stoneware is created. These tiles are produced using the most modern system and quality materials resulting in an extraordinary natural, high-performing variety of porcelain tiles with unique characteristics and limitless applications.

Its natural and structured features make it the perfect solution for architects' and interior designers' contemporary design needs.

KLIMA

Heat adaptive technology on porcelain tiles

Klima is a new-generation ceramic tile that can absorb and repel heat according to individual needs, thanks to the special materials used during production.

When applied to indoor flooring, Klima retains room heat and releases it over the entire surface, producing a warmer feel than a standard floor. When installed on outdoor flooring, Klima repels the heat from sunlight, resisting high temperatures. As a result, even with significant sun exposure, the surface is not burning hot, and the floor remains cool and pleasant to walk on with bare feet. On ventilated façades, Klima helps limit heat dispersion while maintaining a steady indoor temperature.

Klima tiles are suitable for indoor and outdoor applications, for flooring or external walls, to achieve maximum comfort with minimum energy impact.

ORBIT 3Rs

Environmentally sustainable surfaces

Orbit 3Rs is one of the latest innovations created by RAK Ceramics R&D laboratories which produces sustainable and high performance tiles that contribute to the reduce, reuse and recycle concept. The tiles are manufactured with up to 95% recycled materials from wastes generated during the manufacturing process of ceramic tiles.

Orbit 3Rs tiles meet the architectural requirements of environmentally sustainable and durable products, making them ideal for new construction trends and tailoring private homes for both outdoor and indoor environments.

ABSOLUTE MATT

Extra matt, zero gloss surfaces

Absolute Matt is the most recent innovation developed by RAK Ceramics R&D laboratories, which takes the concept of matt to new heights by enabling tiles to achieve an extra-matt surface; with zero reflection and a completely non-glossy finish.

Absolute Matt enhances the tile's natural texture and durability, satisfying any design project's aesthetic and functional requirements.

LUCE

Translucent tiles for special environments

Light becomes a design tool in the hands of the designer with the Maximus Luce translucent slabs, which enrich any environment thanks to its backlighting technology. It is an absolute novelty that will inspire creativity.

With its varied graphics and colours inspired by the most precious marbles and onyx, plus its exceptional feature of transmitting light through, Luce is the perfect solution for sophisticated commercial and residential applications.

We play our role for a better environment and society

Sustainability in every sphere of business is one of the main elements of RAK Ceramics' mission statement. The company is committed to practising environmental stewardship throughout its manufacturing chain – from product design and efficient operations processes – and to playing an active role in building a better community by enhancing the surrounding environment. Organisation's activities improve energy efficiency, reduce pollution, enhance biodiversity and improve the quality of life for both people in the communities it operates in and for its workforce. It recycles natural raw materials to help conserve natural resources and adopts clean development mechanism (cdm) projects to reduce carbon emissions during the manufacturing process.

RAK Ceramics is the first ceramics manufacturing company in its region to produce a global reporting initiative (gri) sustainability and corporate social responsibility (csr) report, based on the latest gri-gr4 guidelines. RAK Ceramics is a founding member of Emirates Green Building Council, which supports the development of sustainable buildings in the UAE.

Quality makes us different

RAK Ceramics was the first company in the United Arab Emirates to be awarded with ISO 9001 certification by internationally recognised UK certification body "CICS" (Ceramic Research Institute Certification Scheme) for ceramics tiles and sanitary wares. Bureau Veritas Certifications verified the implementation of RAK Ceramics' quality management system and certified the company in compliance with the requirements of ISO 9001:2015 with the scope covering the design, development, production and supply of ceramics and porcelain floor and wall tiles, slabs and vitreous china sanitary wares.

Bureau Veritas Certifications also certified RAK Ceramics for **ISO 14001:2015 Environmental Management System.**

RAK Ceramics manufactures ceramic tiles according to the latest version of ISO 13006 and/or EN 1441 standards with equivalent ANSI A137.1 American national standard specifications for ceramics tiles. Its Testing Laboratory is operating in accordance to ISO/IEC 17025 accredited by NATA (National Association of Testing Authorities, Australia). Being a corporate member of EGBC (Emirates Green Building Council), RAK Ceramics supports the promotion and development of sustainable buildings in United Arab Emirates.

The world's leading ceramics lifestyle solution provider

RAK Ceramics helps architects and interior designers create icons and build marvels. It provides sustainable materials that inspire ideas, shapes and hues designed to freely express any style. Unique and inspiring products that realistically resemble natural materials, with unlimited choice.

RAK Ceramics gives porcelain perfection and limitless imagination. Its passion and expertise combined with a careful attention to detail enables it to provide designers and end users with a wide range of integrated ceramics solutions, allowing them freedom to be creative and plenty of room for imagination.

A track record of expertise

RAK Ceramics' products feature in some of the most iconic buildings in the world. From the Burj Al Arab, Atlantis on The Palm and Ferrari World, to Dubai Duty Free, Wembley Stadium, The O2 Arena, Mercedes Benz Showrooms, Airports, Residential Developments and Shopping Malls all over the world.

Marble

Design your luxury interiors with a timeless charm

A wide and varied range of collections inspired by the elegance of marble to offer hundreds of solutions for residential areas, hospitality industry and business places. Revised classy marble and granite patterns displaying elegant veins which remodel your spaces, creating sophisticated ambiances. When you choose a Marble looking tile collection, you choose the timeless beauty of one of the finest materials in nature, combining it with all the advantages of porcelain and ceramic tiles in terms of performance, durability, ease of laying and maintenance.

Versatile and simply beautiful, the Maximus slab revolutionises the design and architecture world by opening up new perspectives in tiles application that were previously unimaginable. All the continuous surfaces are designed for any type of application: floor and walls, cladding, furnishing, countertops and provide creative flexibility and high technical and aesthetic performances.

Luce

MARBLE

LUCE

Light becomes a design tool in the hands of the designer and through elegant surfaces it enriches environments, making them magical.

This is what makes the new Luce slabs a stunning centrepiece for your design concept with amazing backlighting technology. An absolute novelty that will inspire your creativity.

Seven different graphics and colours in marble and onyx effect, that replicate the natural ability of the stones to filter light.

Can be used in hotels, restaurants, offices, shops and sophisticated residential environments. Light up your projects with Luce.

Metal

All the variations of a fascinating material

RAK Ceramics celebrates the dramatic effects and contrasting colours created during the ageing process of raw metal. With a bold and arresting appearance, the Metal collection for wall and floor, is perfect for urban and industrial settings. Metal-effect tiles are offered in a wide range of plain and decor: roughly ground steel, aged bronze, rusty metal sheet, etc. The range perfectly matches with any interior and decorative style, giving life to spaces that are both elegant and surprising.

Wood

Be inspired by wood effect tiles

Natural-looking tiles are one of the key trends for indoor and outdoor floors, and wood is one of the most popular choices thanks to its versatility and beauty. Combining the aesthetic quality of natural timber with the durability of porcelain tiles, wood effect tiles are the perfect option when replacing a floor in a renovation project or laying a new floor in a newly-built property, as it helps in creating your own personal style. Parquet floor tiles can give any room the elegant look of hardwood, in an eco-friendly and new way. It's waterproof, highly resistant to scratches and chemicals, easy to clean, and resistant to heat and frost. It definitely looks like a good idea!

Stone

No better way to create a relaxing environment

RAK Ceramics reinterprets the ancestral charm of stone and transforms it into one of the most preferred materials in contemporary architecture. Solid, durable and extremely versatile, the stone-look tiles have special features and a highly attractive visual impact. A traditional mood that is able to define interior design projects with a modern appeal. RAK Ceramics' stone collection is inspired by various types of stone existing in nature and is the ideal choice to create a particularly welcoming atmosphere that suits a sophisticated environment; providing a sensation of wellness and relaxation.

Concrete

The ultimate expression of minimalism

RAK Ceramics' concrete collection makes a powerful statement with its sheer simplicity. No fuss, no frills, just pure perfection. With its neutral colour and natural texture, the concrete-look tiles are the ideal choice in creating a minimalist look and feel. It is a versatile collection that is well suited in any setting, either with a contemporary or minimalist mood, and is ideal for both residential or industrial ambiances.

Countertop

A multifunctional material that makes a statement

The countertop collection is the next generation of large format tiles that are versatile and highly technical. They are perfect for kitchen countertops, vanity tops and furniture application for residential and commercial settings. Through-body veining is our innovative breakthrough in reproducing natural marble and stone veins that pass through the thickness of the slab's body. This technology gives our slabs a unique design feature, having a consistent marble veining, from the surface to the body until the base – a total synchronisation.

Our countertops also come available as a CookingRAK slab, which is designed to create a multifunctional kitchen space ideal for daily use. Integrating the system into the countertop opens up possibilities for users to prepare, cook and dine in the same place.

A one-of-a-kind hidden induction cooking system

CookingRAK is designed to create a multifunctional kitchen space ideal for daily use. Integrating the system into the countertop opens up possibilities for users to prepare, cook and dine in the same space – a seamlessly designed kitchen top made for dining and entertaining. CookingRAK is a technology that combines the high performance of RAK Ceramics porcelain slabs and the innovative induction system that operates through a magnetic field.

Porcelain has always been the ideal choice for kitchen countertops as it's a durable material resistant to heat, stain, and scratch. It's also resistant to moisture and does not easily stain, making it easier to clean. Safety in the kitchen is a matter of great importance, and with CookingRAK's induction system, the countertop surface does not heat up. Instead, as it works using electromagnetic currents, it will only heat the cookware placed over the hob. With remarkable features, CookingRAK will transform any kitchen into a space where the best experiences are lived.

-  CHEMICAL RESISTANT
-  HEAT RESISTANT
-  ENVIRONMENT-FRIENDLY
-  EASY TO CLEAN
-  WATER RESISTANT
-  STAIN RESISTANT
-  HYGIENIC

Ceramic Wall Tiles

The only limit is imagination

With the continuous innovation in ceramic technology and research, all types of surfaces can now be reproduced: natural wood effect, ceramic wallpaper, metal effect, concrete coatings and more.

Our new ceramic tile collections meet the latest trends, achieving original and eye-catching aesthetic results, with a wide range of structures and colours: from the latest pastel tones to the most intense material effects.

The range of possibilities becomes even bigger, thanks to the wide choice of sizes, from the small brick to the large tile. It's ceramics, and it's cool!

Outdoor

Redefining outdoor living

Give your outdoor spaces a new look. Sustainable and adaptable, porcelain tiles are the ideal choice to design and revamp gardens, patios, terraces, driveways or pool edges. The different installation possibilities allow the material to perfectly blend in with its surrounding landscape.

RAK
CERAMICS

PRODUCT GUIDE

TECHNICAL FEATURES

PORCELAIN TILES (BLA - GL):

Porcelain tiles are manufactured using pure, selectively imported raw materials mixed using the most advanced extraction and sorting techniques; they are obtained with a production process similar to that of single-fired tiles.

The resulting product is a top-quality porcelain tile, obtained by raw materials wet grinding, followed by partial drying by spraying, silo storage to allow homogenisation of properties, and pressing with highly efficient hydraulic presses up to specific pressures more than 500 kg/cm². The high pressure combined with high firing temperature exceeding 1200°C results in a highly compact and strong ceramic surface with very low water absorption (lower than 0.1% according to UNI EN ISO 10545-3) and extremely high mechanical resistance (average value exceeding 50 N/mm² according to UNI EN ISO 10545-4).

Thanks to their low porosity, these porcelain tiles are frost-proof and rated as belonging to the Bla GL class according to the European Standard UNI EN 14411 which requires water absorption ≤ 0.5%.

The MoR (modulus of rupture) in accordance with UNI EN ISO 10545-4 results to 50 N/mm² while the required value is 35 N/mm². RAK Ceramics porcelain tiles are available in a wide range of designs, sizes and finishes.

ADVICE ON LAYING

Although our porcelain tiles can be installed using traditional cement mortars, we advise using modern adhesives. When installing on walls, the two layer spreading system is recommended to perfectly wet the back of the tile.

Quickly dipping each tile in water before installation will remove any dust on the back of the tile for perfect adhesion. Do not wet the tiles if you are using vinyl, acrylic resin adhesives or two-component organic-solvent based adhesive.

It is advisable to incorporate suitable shrinkage-flexion joints (movement/expansion joints) when installing on large floors: the joints should never be spaced more than 4-5 linear metres apart indoors and 3 linear metres apart outdoors. Be careful while using strong coloured grouts as they might leave stains on the surface of the tiles that may be difficult to remove later.

TECHNICAL FEATURES

FULL BODY PORCELAIN TILES (BIA - UGL):

Full body porcelain tiles are manufactured using pure, selectively imported raw materials mixed using the most advanced extraction and sorting techniques; they are obtained with a production process similar to that of single-fired tiles. The resulting product is top-quality porcelain tile, obtained by raw materials wet grinding, followed by partial drying by spraying, silo storage to allow homogenisation of properties, and pressing with highly efficient hydraulic presses up to specific pressures more than 500 kg/cm². The high pressure combined with high firing temperature exceeding 1200 °C results in highly compact and strong ceramic surface with very low water absorption (lower than 0.1% according to UNI EN ISO 10545-3) and extremely high mechanical resistance (average value exceeding 40 N/mm² according to UNI EN ISO 10545-4).

Full body porcelain tiles are suitable for heavy traffic areas as they are characterised by a deep abrasion resistance (equal to 150 mm³ of removed material, as opposed to the 175 mm³ provided for by the UNI EN ISO 10545-6 standard). Thanks to their low porosity, these tiles are frost-proof and rated as belonging to the BIA UGL class according to the International Standard ISO 13006 and European Standard UNI EN 14411 which requires water absorption ≤ 0.5%. Chemical acid and base resistance (UNI EN ISO 10545-13) makes full body porcelain tiles suitable for environments where aggressive chemicals are used, e.g. food processing factories, hospitals, chemical or pharmaceutical plants. The full body porcelain tiles are available in a wide range of sizes and surfaces (slip-resistant finish also available).

ADVICE ON LAYING

Although our full body porcelain tiles can be installed using traditional cement mortars, we advise using modern adhesives. For large sizes over 40x40cm, outdoor and wall installations, the two-layer spreading system is recommended to perfectly wet the back of the tile. Quickly dipping each tile in water before installation will remove any dust on the back of the tile for perfect adhesion. Do not wet the tiles if you are using vinyl, acrylic resin adhesives or two-component organic-solvent based adhesive.

It is advisable to incorporate suitable shrinkage-flexion joints (movement/expansion joints) when installing on large floors: the joints should never be spaced more than 4-5 linear metres apart indoors and 3 linear metres apart outdoors. Be careful while using strong coloured grouts as they might leave stains on the surface of the tiles that may be difficult to remove later.

TECHNICAL FEATURES

WHITE AND RED BODY CERAMIC TILES (BIII):

White and Red Body Ceramic tiles are made with finest quality clays and chamotte (a ceramic raw material with high percentage of silica). These raw materials are submitted to dry grinding and suitably mixed and wet and then pressed with hydraulic presses. Quick-cycle support firing is obtained via roller kilns reaching temperatures of approximately 1100°C. After biscuit glazing, the vitrified product is sintered in a single-layer roller kiln at approximately 10300°C. The resulting wall tiles have an average bending strength that is higher than 15/mrre in accordance with the UNI EN ISO10545-4 standard and a water absorption level that is higher than 10%; they belong to the BIII (GL) group according to the UNI EN 14411 standard. This class of products shows virtually no shrinkage during firing; therefore such dimensional consistency results in extremely easy laying.

ADVICE ON LAYING

White and Red Body Ceramic tiles can be laid using either tile adhesives or cement mortar. Under no circumstances should the tiles be wet before laying when using acrylic or vinyl resin based adhesives or two-component organic solvent based adhesives. When laying large sized tiles it is best to adopt the two-layer spreading method and, when the laying surface is very large, to provide for suitable expansion joints which must not be spaced more than 4-5 linear metres apart from one another.

IMPORTANT POINTS TO REMEMBER WHILE LAYING THESE TILES

When laying on wet concrete or plaster, leave to dry for at least one week for each centimetre of thickness.

When laying on brick, never lay on tile adhesive measuring more than 4-5mm in thickness. For laying on flexible supports (for example plasterboard panels, polymer panels, etc.) which may result in movement of the tiles, we advise laying on tile adhesive measuring no more than 2-3mm in thickness and to use class C2 or D1 glues.

For laying on waterproof brick, which prevents the release of damp, we advise laying on tile adhesive measuring no more than 3mm in thickness and to use class C2 or D1 glues.

Avoid laying without expansion joints or joints where stress due to expansion is released directly onto the tile.

TECHNICAL FEATURES

GRES WHITE BODY TILES (BIIA):

Gres white body tiles are created by mixing raw materials including high quality white or red clays, quartz and feldspar in wet grinding ball mills. After grinding, a clay-based suspension of these materials called a slip is fed out of the mill then spray-dried to remove excess moisture. Following the spray drying process, the free flowing powder is pressed using advanced hydraulic presses with a specific pressing power exceeding 300 kg/cm² in order to obtain a compact gres body. Once dried, the tiles are coated and decorated with glazes to make them aesthetically pleasing and meet our customers' design requirements.

The glazed tile body is then fired in roller kilns where temperatures of approximately 1200 °C are reached. The resulting product is normally a medium-to-low porosity (3% to 5%) tile, in compliance with the International Standard ISO 13006 and European Standard UNI EN 14411 standard and rated as belonging to the BIIa GL group with notable technological specifications such as the product flexural strength (average value: 30N/mm² according to UNI EN ISO 10545-4).

As for wear resistance, this will depend on the type and colour of glazing and may change according to different products or collections. As a general rule, bright finishes are not recommended for heavy traffic floors or rooms opening onto outdoor areas, where sand or other abrasive materials are more likely to be brought in.

ADVICE ON LAYING

Our gres white body tiles can be laid using either traditional cement mortar or modern tile adhesives. When laying large size tiles, it is best to adopt the two-layer spreading system to ensure the adhesive is spread over 90% of the tile surface. Quickly dipping each tile in water before installation will remove any dust on the back of the tile for perfect adhesion, however, do not wet the tiles if you are using vinyl, acrylic resin adhesives or two-component organic-solvent based adhesive.

It is advisable to always incorporate suitable shrinkage-flexion joints (movement/expansion joints) which must not be spaced more than 4-5 metres apart from one another. These joints must be inserted not only between the tiles, but also reach the levelling compound below, consisting of either cement mortar or dry compound, depending on whether the tiles are set in the traditional manner or using a modern adhesive. The movement joints must be sealed with appropriate materials such as silicone or polyurethane-based sealants, depending on the anticipated traffic of the application area.

Appropriate tile bedding layers should be used such as underlay, damp course, vapour barrier or any other layer necessary to prevent the tiles from detaching themselves or cracking due to water penetration.

MAINTENANCE AND CLEANING OF TILES

Maintenance of ceramic and porcelain tiles on dry surfaces is relatively easy. RAK Ceramics tiles are highly scratch and stain resistant.

- By regularly sweeping the floor, you can help avoid scratches that small pebbles or sand can create.
- Make it a habit to always wipe the soles of your shoes on a mat before entering the house. Thoroughly wipe up any spills using plain warm water.
- While they are not likely to stain your ceramic tiles, spills may stain the grout between the tiles and if they are left to sit for too long, may also stain the actual tiles.
- Plain water is the ideal cleaner because it leaves no residue if you dry the surface of the tiles thoroughly after cleaning.
- If tiles are left wet after cleaning, there may be some unsightly mineral residue after the water dries, but this can easily be removed by spot cleaning.
- If stains resist cleaning with water alone, you can use a mild acidic solution, such as white vinegar. Use it highly diluted and rinse with plain water then dry.
- As food stains are acidic in nature, try using a mild alkaline solution.
- Use common detergents sparingly, rinse with plain water and dry thoroughly.

RAK CERAMICS CARE: EXCLUSIVE POST-INSTALLATION CLEANING SERVICE

We have collaborated with Fila, a leading company in cleaning, protection and maintenance of ceramic surfaces, to offer an exclusive cleaning service to address our customers' post-installation concerns.

Cleaning after laying is of vital importance as a lot of unseen debris and reactive chemicals can affect the visual appearance of the ceramic material. With this new service, our customers can take advantage of Fila's professional on-site consultation. For more info please visit www.rakceramics.com

FILA IS A RECOMMENDED PARTNER OF RAK CERAMICS

TILE-LAYING RECOMMENDATIONS

All RAK Ceramics products are subject to size and shade variations. Please check the size, batch number, calibre, tone, choice, colour, and quality of the pieces before the installation, as no claims will be accepted once the tiles are installed.

Place some tiles on the floor – 2 or 3 sqm – and check the overall technical and aesthetic characteristics with care. Check if there is enough product to finish the work.

Manufacturer's responsibility is only limited to replacement of defective material if any, prior to fixing of tiles, and we will not entertain claim of any nature after the tiles are installed.

Therefore, if any issue is found on the delivered product, the contractor for installation or the client should not install the tiles. The issue should be communicated to RAK Ceramics for investigation and further action for resolution as required.

The substrate must be a compact cement bed. Levelling system ensures flatness between tiles avoiding movements during the mortar setting. This reduces the time for the ceramic laying, obtaining a perfect lippage-free finish. Avoid movements between the tiles due to the mortar setting.

The width of grout joints must be established by the installation supervisor, unless grout widths are regulated by national laying standards. The grout colour should be selected according to the colour of the tile. We recommend to select a matching colour. Before using fine-grain coloured grout on lapped, polished or brushed products, always test it. If the pigment is very adhesive, it may be very difficult to remove.

We recommend to lay the tiles by using suitable adhesives for each kind of product and surface. As a general rule, tiles must be installed in the same position. The minimum joint is 2mm for rectified tiles, although we suggest a higher joint for big size products. After grouting, remove any excess product as quickly as possible by repeatedly washing the area with a sponge and water.

Steps to follow:

1. First, set the tool to the scale according to the ceramic thickness.
2. Introduce the crossheads and continue laying the adjacent tiles.
3. Put the wedges in the crosshead manually.
4. Tighten the wedges with the pliers to level the pieces.
5. Allow for setting for the time recommended by the manufacturer of the adhesive cement.
6. Remove the crossheads. Hit the crosshead with a rubber mallet or with your foot in the direction of the joint. Do not hit the wedges.

The company will not accept any claim if this is due to the problems caused by not following these suggestions and instructions.

PACKAGING DETAILS

A-Frame Vertical Pallet

PALLET DIMENSIONS (CM)

Finish	Length	Height	Width
Polished / Natural	310	160	35

Horizontal Pallet

PALLET DIMENSIONS (CM)

Finish	Length	Height	Width
Polished / Natural	267	33.5	133

Finish	Length	Height	Width
Polished / Natural	250	40	135

Box Pallet

PALLET DIMENSIONS (CM)

Finish	Length	Height	Width
Polished / Natural	130	72	130

Note: All tile dimensions mentioned above are rectified. Unrectified size is available in +/-140x308cm on request
All weights and thickness mentioned in the above table are approximate average.

TECHNICAL MANUAL

HANDLING MAXIMUS:

- Maximus extra-large format slabs arrive in oversized crates, which require specific handling equipment to prevent from damage occurring during forklift operation, specific fork sizes must be used. For example, to handle a crate of 135x305cm tiles from the side, 112cm/44" long forks are recommended.
- To handle the same crate from the narrow end requires forks that are at least 213cm/84" long. Lifting multiple crates with longer forks may require forklifts with a greater lift capacity.
- Specialised tools and equipment are currently available for the handling, installation and cutting of large porcelain surfaces. Innovative trowels with unique notch configurations can help increase the consistency of the mortar coverage on the back of the tile.
- To increase rigidity and limit twisting, use a system composed of parallel and transverse guides.
- For a perfect adhesion, clean the slab and the suckers with a damp sponge.
- The suckers run along the guides and adhere to the slab. Make sure that a vacuum is created between the device and the surface.
- A single guide device can be used for sizes of maximum length.
- Use four operators at a time to carry out handling operations of large size slabs.
- Lift the slab along the long side and hang it vertically to the handles of the frame.
- For the large size slab, a suitably reinforced trolley is recommended. Set the guides to the trolley for carrying the slab.
- Follow the same procedure for handling the 120x240cm and all other sub-sizes, where only two operators are sufficient.

CUT-TO-PIECES AND DRILLING

- RAK Ceramics recommends the use of special designed devices for handling as well as cutting and laying of big slabs.
- Handle slab with a proper and professional trolley of aluminum parallel profile with crossbars and vacuum suction cups along with a vacuum gauge. Please use double suction cups for slabs above 300cm. This could make sure that appropriate vacuum is created between the device and the slab. Lift the slab and keep it vertically to the trolley frame.
- Keep the slab on a stable, flat and intractable surface. For successful cutting and drilling, RAK Ceramics recommends using a professional modular workbench with aluminum profiles and proper cutting tools for each type of cut.
- Set the cutting unit on the tile so that the references coincide with the marked lines and lock it with the appropriate suckers. Score the slab from one edge to the other, being careful to maintain the same pressure while moving.
- When the cut has been made, move the slab until the slit line sticks out 10 to 15cm from the workbench. Start hew from both sides using appropriate cutting-off pliers and follow the scoring line to complete the hew.
- Smooth rough edges and sides with an appropriate diamond polishing pad.
- To drill internal cutouts from the slab, first you need to draw the guide lines. For circular cuts, use the compass device with suction cups. For rectangular cuts, drill first a 5 to 7mm hole at the corners of the rectangle shape, using a non-percussion drill. For better drilling, always keep the surface and drill a little bit wet. Then follow the drilled lines using a diamond-blade angle grinder and finish off the edges with a diamond-polishing pad. Round holes (4) must be made in wet drilling, using diamond-blades. Start engraving the surface with a 75° point angle, then straighten out the drill avoiding excessive pressure on the slab. Also, in this case finish with a diamond-polishing pad.
- Manual traction devices are available, in order to make a finishing cut at 45° and thus enable special applications of the material.

TECHNICAL MANUAL

INSTALLATION:

Laying Maximus slabs requires similar laying conditions to those required for traditional format slabs. Maximus slabs require the adhesive to be applied both on the setting bed and on the back of the slab.

MAXIMUS SLABS FOR FLOORING REQUIRE THE FOLLOWING CONDITIONS:

- A flat surface that is clean and free from dust, scraps and any lumps of cement.
- The setting bed must be uniform and have already undergone the dry shrinkage process.
- Repair any cracks.
- Any uneven parts on the surface must be filled with suitable levelling compounds.

INSTRUMENTS REQUIRED:

- Cement-based powder adhesive for full spread, class C2E according to EN12004 and S1 according to EN12002 standards.
- 3x3mm square toothed trowel and 15mm round toothed trowel.
- Frame with suction cups for handling or double suction cups.
- Non-bounce plastic mallet 170x370mm.
- Levelling system: base clip + wedge + pliers.

BONDING TO THE FLOOR:

Ensure that the surface to be covered is solid, flat and free from dust and oil/grease.

- Use the adhesives described on page 254 mixed according to the specifications indicated in the technical data sheet of the chosen adhesive.
- Spread the adhesive onto the surface to be covered with a 15mm round toothed trowel across an area of 5/10cm more than the dimensions of the slab.
- With the slab in a vertical position on the handling frame, spread the adhesive onto the back of the slab with a 3x3mm square toothed trowel.
- Using the frame with suction cups, bring the slab into a horizontal position and lay it.
- To guarantee uniform bonding of the slab, the special 170x370mm non-bounce plastic mallet must be used, tapping from the middle towards the edges so as to remove any air pockets between the back of the slab, the adhesive and the surface to be tiled using the levelling system.

BONDING TO THE WALL:

- Ensure that the surface to be covered is solid, flat and free from dust.
- Cement-based powder adhesive for full spread, class C2E according to EN12004 and S1 according to EN12002 standards.
- Spread the adhesive onto the surface to be covered with a 15mm round toothed trowel across an area of 5/10cm more than the dimensions of the slab.
- With the slab in a vertical position on the handling frame, spread the adhesive onto the back of the slab with a 3x3mm square toothed trowel.
- Using the handling frame in a vertical position, lay the slab.
- Before releasing the slab from the handling frame, ensure that the adhesive will hold it in place.
- To guarantee complete bonding of the slab and eliminate any air, tap from the middle towards the edges using the non-bounce plastic mallet.
- Before bonding the next slab, fix the hidden mechanical hook to the wall with the relevant nails (length 27mm) using the gas-powered nailing machine.

GROUT FILLING:

- Use professional and high quality grouting products.
- While stirring, pour the grout into a clean and rust free container, containing 22/26 percent by weight of clean water.
- Mix the grout with a low-speed mixer to avoid air entrapment, until a smooth paste is obtained.
- Let the mix stand for 2 to 3 minutes. Stir again briefly before use.
- Use the mixture within 20 to 25 minutes of its preparation.
- Fill the joints with a special grout float or rubber squeeze without leaving any gaps or steps. Remove any excess grout and leave for 15 to 30 minutes.
- Clean off the excess mixture with a hard, damp sponge, working in a diagonal direction to the joints.

CLEANING & MAINTENANCE:

Maximus products are non porous (due to their high quality raw materials, stringent production parameters and state of the art technology), hence any dust or deposited waste cannot penetrate the surface. For most cases, only a damp cloth is sufficient for cleaning. Regular cleaning highlights the aesthetic features of the surface and gives it exceptional shine.
